

# CAIRO PROGRAMMING LANGUAGE

Add a short description

Cairo is a  
programming  
language  
designed  
specifically for  
smart contracts  
and  
decentralized  
applications on  
the Ethereum  
blockchain.

...

It was created to address some of the limitations and challenges faced by traditional programming languages when working with blockchain technologies.

...

# FEATURES & Design Principles

- 01 • Deterministic Execution
- 02 • Scalability
- 03 • Turing-Complete
- 04 • Verifiability
- 05 • Zero-Knowledge Proofs
